# Representation, FG-module and character

Let W be a vector space of the dimension n on a field F and let G be a finite group. Then

► a representation of G of degree n is a homomorphism  $\rho: G \to GL(W)$ .

・ 同 ト ・ ヨ ト ・ ヨ ト

### Representation, FG-module and character

Let W be a vector space of the dimension n on a field F and let G be a finite group. Then

► a representation of G of degree n is a homomorphism  $\rho: G \to GL(W)$ .

► Vector space W with the defination  $w.g = w\rho(g)$ , where  $w \in W$  and  $g \in G$ , is called a *FG*-module. W is said to be irreducible, if it has no nontrivial submodules. Also, if W is an irreducible *FG*-module, then  $\rho$  is called irreducible.

### Representation, FG-module and character

Let W be a vector space of the dimension n on a field F and let G be a finite group. Then

► a representation of G of degree n is a homomorphism  $\rho: G \to GL(W)$ .

► Vector space W with the defination  $w.g = w\rho(g)$ , where  $w \in W$  and  $g \in G$ , is called a *FG*-module. W is said to be irreducible, if it has no nontrivial submodules. Also, if W is an irreducible *FG*-module, then  $\rho$  is called irreducible.

 $\blacktriangleright$  a function

$$\begin{aligned} \theta_{\rho} &: G \to F \\ g &\mapsto Tr(\rho(g)) \end{aligned}$$

is called a character corresponding to  $\rho$ .

- 4 周 ト 4 ヨ ト 4 ヨ

Degree of a character

The degree of  $\theta_{\rho}$  is the degree of  $\rho$ , which is equal to  $\theta_{\rho}(1)$ .

- 4 回 ト - 4 回 ト - 4 回 ト

### Degree of a character

The degree of  $\theta_{\rho}$  is the degree of  $\rho$ , which is equal to  $\theta_{\rho}(1)$ .

### Irreducible character

If  $\rho$  is irreducible, then  $\theta_{\rho}$  is called an irreducible character.

- 4 回 ト - 4 回 ト - 4 回 ト

# Degree of a character

The degree of  $\theta_{\rho}$  is the degree of  $\rho$ , which is equal to  $\theta_{\rho}(1)$ .

### Irreducible character

If  $\rho$  is irreducible, then  $\theta_{\rho}$  is called an irreducible character.

# $\operatorname{Irr}(G)$

The set of irreducible characters of G is denoted by Irr(G).

# $\operatorname{cd}(G) X_1(G)$

The set of all irreducible character degrees of G fogetting multiplicities is shown by cd(G). Also, the set of all irreducible character degrees of G counting multiplicities is shown by  $X_1(G)$ .

(本部) (本語) (本語)

# $cd(G) X_1(G)$

The set of all irreducible character degrees of G fogetting multiplicities is shown by cd(G). Also, the set of all irreducible character degrees of G counting multiplicities is shown by  $X_1(G)$ .

# $\rho(G)$

The set of prime divisors of the elements of cd(G) is denoted by  $\rho(G)$ .
